

Scenario: Construction is to take place on W. Hillsborough Avenue between S. Lagoon Street and Sheldon Road. The closure impacts both left turn lanes. The section begins with four lanes, adds a fifth lane, then a sixth lane is added just before the intersection. *How should this lane closure be entered into Live Link?*

Scenario: Construction is to take place on W. Hillsborough Avenue between S. Lagoon Street and Sheldon Road. The closure impacts both left turn lanes. The section begins with four lanes, adds a fifth lane, then a sixth lane is added just before the intersection. *How should this lane closure be entered into Live Link?*

Recommendation: Enter two separate lane closures.

- Closure 1) Create a lane closure for the first segment, which starts just east of the intersection with Lagoon Street. Since the fifth lane is added a short distance from the starting point, use the PLUS icon to indicate 5 lanes for this entire segment. Mark “Lane 1” as the closed lane.
- Closure 2) Create a lane closure for the second segment, which starts at the point that a sixth lane is added. Use the PLUS icon to indicate 6 lanes for this segment. Mark “Lane 1” and “Lane 2” as the closed lanes.
